

Item 1: Implement a functionality that permits to log which files were restored during a restore job (especially when using the Bweb interface).

Date: 26 October 2010

Origin: Guillaume Valdenaire - guillaume.valdenaire@gmail.com

Status: Doesn't exist

What: The ability to log what have been restored during a restore job. This should be logged in the status of the job displayed in the files pointed by the Message Ressource of the Bacula-dir.

Why: Users would like to know what have been restored during a specific Restore Job. By having the date and jobid of the restore job the user can see what have been restored, when and where it has been restored.

Notes:
