

Delving

open-source solutions for cultural heritage

The Hague, 18-01-2021

Delving is an SME based in The Netherlands that provides unified cultural heritage data management software based on the CIDOC-CRM. Its mission is to provide tailored but open-source solutions that enhance the visibility and accessibility of their customers collections and research data. Recent key projects include 'aggregating metadata about stolen art in the second world war for restitution research', 'archive system with embedded models from arches'.

Our goal is to describe the internal storage model for the aggregation platform and new mapping engine with the CIDOC-CRM. Our focus for CIDOC-CRM contributions for this year would be on the JSON-LD representation and the use of the standard to support our Archival APIs such as EAD and 'records in context' (RICO).

We would like to express our keen interest in formally becoming a member of the CRM Special Interest Group (CRM-SIG) and to actively contribute to the further development and adoption of CIDOC-CRM. Delving will be represented at the CRM-SIG by Sjoerd Siebinga.

With kinders regards,

Sjoerd Siebinga

Sjoerd Siebinga (CEO)
