

Elstree Reservoir[edit] The dam was built in 1795 by French prisoners of war.[34] English watercolour landscape painter John Hassell writes: "At the top of Stanmore Hill we enter on Bushy Heath, and at some distance on the right in the valley catch a view of the celebrated reservoir, the property of the Grand Junction Company, on Aidenham Common, at the foot of the village of Elstree. This noble sheet of water occupies a space of considerable extent on the verge of Aidenham Common, which thirty years ago was a barren waste; here the improvements in agriculture are indeed conspicuous, for at this place a poor, sandy, meagre, wretched soil has now by good husbandry been converted into rich pasturage. "The reservoir has all the appearance of a lake; and when the timber that surrounds it shall have arrived at maturity, it will be a most delightful spot. From this immense sheet of water, in event of drought or a deficiency of upland waters, the lower parts of the Grand Junction and the Paddington Canals can have an immediate supply. The feeder from this reservoir enters the main stream near Rickmansworth, above Batchworth Mills, and supplies the millers' below with 300 locks of water, to whose interest the Duke of Northumberland is a perpetual trustee." [35] In 1886, the Photographic Society of Great Britain featured an exhibition of photos of Elstree Reservoir by Edgar Clifton.[36] During World War I, then Major Keith Caldwell with No. 74 Squadron RAF, used Elstree Reservoir for target practice.[37] In 1918, one of the pilots accidentally killed a local resident when his machine gun misfired.[38]
