

Demonstrates various uses of fo:inline with borders and padding.

To **emphasize** a word we give it a 1pt border and a background.

Demonstrates a big border **inline with border="solid 5pt red" padding="5pt" extending over the small allocation rectangle to the top and bottom.**

Demonstrates **unsymmetric borders and padding** but the baselines should align.

Big border **but a smaller font. This rectangle is** **incorrect!!**

This demonstrates a long inline **with .conditionality set to "discard". It has a left and right border at the beginning of the and the end of the inline only. Any lines in between only have a top and bottom border.** Back to normal here.

This demonstrates correct line breaking of <fo:inline> as this fits exactly on a line.
This demonstrates correct line breaking of <fo:inline> as this fits exactly on a **line. Not really as we started a fo:inline with border/padding just before the word "line" which forces it to the next line.**

Demonstrates nested **inlines finishing together**
