

ENUMITEM PACKAGE ITEMINDENT BUG

First the alnum list:

```
1: If a then b
2: do
    1: if  $c = d$  then return B.
    2: does this line also add a \noindent?
        1: done
            1: junk
                1: deeper junk
                    1: crazy deep
3: junk
End of alnum list.
```

Second the alnum2 list:

```
1: If a then b
2: do
    1: if  $c = d$  then return B
    1: done
        1: junk
            1: deeper junk
                1: crazy deep
3: junk
End of alnum2 list
```

```
:
:
:
```

Bug 1: indentation level 3 ignores the setting on how much to indent. Note that the alnum list and alnum2 list are the same except for differing in the amount of level 3 indentation. Yet the pdf shows the same amount of indentation. In my document where I discovered this bug I need level 3 indentation (and also 1 and 2) to work.
