cordially invites you to a colloquium

The Rocks Clustering Toolkit

by

Greg Bruno

The San Diego Super Computer Center

Abstract: Commercial off-the-shelf (COTS) clusters based on Linux and open-source tools have become essential components of the computing fabric. But clusters can be difficult to install and manage without a good toolset and management methodology. This talk will describe the Rocks Clustering Toolkit – a set of installation tools, management strategy, monitoring tools, and a simple mechanism for keeping software on clusters up to date with the fast pace of change in the Linux community.

4:00 pm, Monday, March 24th, 2003
Room 326, Scrugham Engineering and Mines
